

**FEATURES**

- Illuminated custom panels
- Wafer thin cool burning lamp
- Offered in sizes 1 RU and 2 RU
- Available in 4 standard colors
- Operates on 24 VDC
- Custom wall plates available on request

RCI Custom Products **EL Series** Panels utilize a unique lighting technology to “back light” custom panels. Electro Luminescence provides hi-tech, consistently even illumination by way of a cool burning wafer thin lamp. Most notably used in Military Aircraft cockpits for illumination of flight control panels, this futuristic lighting is available through RCI Custom Products for use with custom audio/video control plates and panels. Plates and panels made with “EL” technology are attractive, durable, and easily installed.

Light up your logo, or use for instructional information. Excellent for low light level areas such as control rooms, broadcast applications, or other areas where your equipment rack has visibility. The unique panels add that “extra touch” and draw attention to your company branding or service information. Custom wall plates are also available upon request. Use with screen control or volume control plates in boardrooms, backstage, or in any other low light level areas where visibility and control location is important.

Lamp colors include blue, green, blue green, and pink white. Order 24 VDC power supply separately.

**A & E SPECIFICATION**

*Custom lighted rack mounted panels shall be the RCI Custom Products Model \_\_\_\_\_ (EL-1, EL-2). The panels shall conform to EIA standards for 19” rack mounting and require \_\_\_\_\_ (1 RU, 2 RU) of panel space. Panels shall be finished black, and “back lit” lamp color shall be \_\_\_\_\_ (blue, green, blue green or pink white). Units shall be engraved as required. 24 VDC power supply required.*
