

The **RCI Custom Products EB Series Box Cover** is the most effective way to make use of standard NEMA sized recessed electrical boxes. EB series covers provide the perfect solution when security and controlled access to connectors and other devices is desired. Effectively utilized in venues such as convention centers, ballrooms, press rooms, stadiums, and houses of worship.

The current design provides a professional housing for AV and Broadcast connectivity using readily available Hoffman electrical boxes (not included) but may be field drilled to fit most commonly used J Boxes. A raised and beveled 2" oversized edge helps accommodate inconsistent box and wall installation. Available in 8x8, 10x10, 12x12, 16x16, 18x18 and 24x24 sizes, the EB insert is made with durable Powder Coated .060 Cold Rolled Steel. Connectivity panel available separately and on PanelBuilder SE, and may be configured with any type of fiber or copper connectivity. The locking hinged front door panel allows for secure housing of your connectivity when not in use. Comes standard in White Matte or Black Matte Powder Coat finish, but always available in custom finishes.

FEATURES

- Rugged .060 Cold Rolled Steel construction
- Easily installed in any direction or orientation
- Continuous durable piano hinged door
- Cylinder Lock with two keys
- 1 1/8" useable space inside cover
- 2" trim (1" on all sides) flange to finish installation
- Black or White Matte Finish Powder Coat standard finish. Custom colors available.

Note: Replace suffix "xx" with powder coat paint finish, "PW" Powder Coat White, or "PBSM" Powder Coat Black Smooth Matte
